

Summary

The Ejum Graduate Engagement Platform is structured around strong domain-driven principles and provides seamless interaction between job seekers and employers. Key features like skill-based discovery, document uploads, shortlisting, and recruiter-driven hiring decisions are supported by a layered backend architecture.

Each UML diagram included serves a critical purpose:

- **Use Case Diagram:** Outlines what each user can do
- **Activity Diagrams:** Illustrate workflows and business rules
- **Class Diagram:** Maps the logical and technical architecture

By following these diagrams and flows, both developers and stakeholders can confidently understand and contribute to the system.
